DESCRIPTORS- *STUDENT ENROLLMENT, STATISTICAL DATA, *POPULATION TRENDS, *ENROLLMENT TRENDS, *ELEMENTARY SCHOOLS, *SECONDARY SCHOOLS, ENROLLMENT PROJECTIONS, NEBRASKA,

THREE MAJOR TRENDS WILL SIGNIFICANTLY AFFECT ELEMENTARY, SECONDARY, AND HIGHER EDUCATION ENROLLMENTS THROUGHOUT THE STATE--THE INCREASING TOTAL POPULATION, THE POPULATION DISTRIBUTION BY AGE, AND THE GEOGRAPHIC RELOCATION OF THE POPULATION. THE STATE'S POPULATION WILL CONTINUE TO INCREASE, BUT AT A DECREASING RATIO. THE 0-19-YEAR-OLD POPULATION WILL CONTINUE TO REPRESENT A SIGNIFICANT PORTION OF THE TOTAL POPULATION. THE MOST SIGNIFICANT TREND IS THE RURAL TO URBAN MIGRATION. FROM 1960 TO 1966, AN ESTIMATED 63 COUNTIES LOST POPULATION WHILE TOWNS OF 2,500 OR MORE INCREASED THEIR SHARE OF THE STATE'S POPULATION FROM 49.1 TO 51.8 PERCENT. GRADE 12 ENROLLMENT INCREASED FROM 17,484 IN 1963 TO 24,698 IN 1965, A 41 PERCENT GAIN. THIS GROUP IS EXPECTED TO APPROXIMATE 26,000 THROUGH 1975. THE ELEMENTARY AND SECONDARY SCHOOL POPULATION WILL STABILIZE BUT GAINS AND LOSSES WITHIN COUNTIES WILL CONTINUE TO OCCUR. THE TREND TOWARD CONSOLIDATION OF ELEMENTARY AND SECONDARY SCHOOL ENROLLMENT IS CLEAR, BUT BOTH WILL CONTINUE TO EXPERIENCE PRESSURES AND PROBLEMS RELATED TO SIGNIFICANT FLUCTUATIONS IN STUDENT ENROLLMENTS. DATA WERE FROM THE 1962-65 ANNUAL FALL ACCREDITATION AND APPROVAL REPORTS, SUBMITTED BY EVERY PUBLIC AND PRIVATE SCHOOL EACH FALL. ENROLLMENTS AT EACH GRADE LEVEL FOR EACH COUNTY AND THE STATE WERE CALCULATED, AND STRAIGHT LINE PROJECTIONS WERE MADE THROUGH 1975. THE APPENDIX CONTAINS TABULAR DATA ON THE ENROLLMENT FOR THE STUDY PERIOD AND PROJECTED DATA FOR THE 1966-77 PERIOD FOR EACH OF THE 92 COUNTIES. CHARTS FURNISH POPULATION DATA FOR THE STATE AS A WHOLE. (EM)

PREFACE

While the ever changing world of knowledge has traditionally exerted increasing financial pressures on institutions of higher education, it remains that increasing numbers of students seeking advanced education are and will continue to be one of the major causes of mounting costs of higher education. The current enrollment explosion in education has resulted in the strain upon the ability of institutions of higher education to provide facilities and faculties in quantity and quality necessary to satisfy the educational aspirations of so many.

College and university enrollments in Nebraska institutions of higher learning have far outstripped projections which were made some years ago. Furthermore, the institutions have been plagued by the necessity of making enrollment projections without the benefit of necessary detailed demographic data. The last major enrollment study conducted in the State of Nebraska was published by the Legislative Council in January of 1961.[1] This report projected enrollment at the University of Nebraska, for example, to be approximately 15,000 students by 1970, a figure which was exceeded by nearly 2,000 students in 1966.

---

[1] Glenny, L. A. The Nebraska Study of Higher Education, January, 1961, pp 14-19.

Recognizing the need for current reliable statewide projection information, a demographic study related to higher education enrollment was undertaken as a cooperative effort by the Voluntary Coordinating Council for Public Higher Education, the Nebraska Commission for the Higher Education Facilities Act of 1963, and the Coordinating Unit for Nebraska Occupational Needs, Research, and Educational Development. The Voluntary Coordinating Council for Public Higher Education directed the study, and the costs of the study were borne primarily by the Nebraska Commission for the Higher Education Facilities Act of 1963.

At an early stage in the design of the study, Mr. Clarence Lust, a demographic expert for the state colleges of California, advised the study group. The study group also received a valuable assistance from the Committee of Registrars which represented the various facets of Nebraska Higher Education.

Special thanks are due to Dr. William Schindler, Chief of the Department of Statistical Services of the State Department of Education, for his assistance in providing the basic elementary-secondary enrollment data necessary to this study.

And especially, gratitude is also due to all institutions of higher education in the State of Nebraska, without whose most willing donation of both time and material, completion of the study would not have been possible.

This report will be published in two parts. Part I deals with the projection of elementary-secondary enrollment through 1975. Part II now in the process of preparation will contain college-by-college projection of estimated enrollment levels through 1975. Because of the nature of the study and some inconsistencies in basic data, projections have certain weaknesses which will be discussed throughout the document; but these weaknesses in no way nullify the significance of the trends nor are they of such magnitude as to render invalid the data for planning purposes.

Any enrollment study is actually a study of enrollment potential rather than a prophecy of such. For a variety of reasons the actual enrollment varies from the projected enrollment in any given year. It is felt, however, that the comprehensive projections, county-by-county basis, contained in the document are reliable indicators of elementary and secondary school enrollments which in turn will be translated into higher education enrollment potential.

Chapter I

TRENDS IN NEBRASKA POPULATION

In the study of a particular segment of population it is necessary to review the total population of which the segment is a dependent part. Nebraska elementary-secondary school populations are a dependent segment of the total population of Nebraska. Numerical changes, age distributions, and shifts in Nebraska's total population will eventually be reflected in similar ways in the State's elementary-secondary school population.

In the two decades prior to the decade of the sixties, Nebraska's total population has remained relatively stable. (See Figure I .) After experiencing a moderate loss of population during the 1930's, the State's total population increased 9,676 in the decade of the forties, and 85,820 in the decade of the fifties. These numerical increases represent percentage increases of only .7 per cent and 6.5 per cent, respectively. "Since the 1960 census, Nebraska's average yearly rate of growth has been 1.0 per cent, which is notably above the 0.6 per cent rate for the 1950-1960

decade, but still significantly below the national rate of 1.4 per cent."[1] Thus, the population explosion experienced by the nation and attributed to the Second World War and the Korean conflict appears to have been of minor proportions in the State of Nebraska. In view of the Bureau of Business Research's estimated 1966 total population of 1,516,044 and the National Planning Association's 1975 estimate of 1,676,800, it appears that the total population trend for Nebraska can be expected to be maintained at a predictably moderate rate through the sixties unless changed by new industrial development.

Figure I also illustrates that, while significant national events have affected Nebraska's total population in a relatively minor fashion, these same events have contributed significantly to changes in the distribution of the State's population by age groups.

Births and birth rates in the State of Nebraska, have, since 1940, followed a persistent upward trend. (See Figure II.) According to statistics compiled by the Nebraska State Department of Health and presented in Table I, births in Nebraska rose sharply from 24,294 in 1945 to a record number

1965	1,477,000	27,829	18.8

Rate per 1,000 Estimated Population

of 34,544 births in 1961. Since 1961 births and birth rates in Nebraska have fallen off significantly. It should be noted, however, that the depressed birth trend starting in 1961 will not have a significant effect upon estimated 12th grade enrollments and potential college enrollment until approximately 1979. Births and birth rates prior to 1957 are therefore of greater importance to the projection of college enrollment potential through 1975.

Figure I shows that between 1950 and 1960 the 0 to 19 year old population group regained losses experienced in the 40's and demonstrated a marked increase from 33.6% of the population in 1950 to 38% in 1960. The 0 to 19 year old population group increased from 445,949 in 1950 to 536,108 in 1960 or approximately 20% while during the same decade the State's total population increased by only 6.5. In spite of a significant decline in the State's birth rate after 1961, Nebraska School Census reports from 1965 and 1966 show only a moderate numerical decline in the 0 to 19 year old population group of 3,159[2] between 1966 and 1967. Assuming that population factors remain constant during the remainder of the sixties, one can assume that the 0 to 19

1966-67 Nebraska School Statistics, Statistical Services and School Finance Section, Department of Education, Lincoln, Nebraska, Vol. 8, No. 1, p.35.

year old population group has, like the general population, reached a point of stabilization. The data, however, does not, at this time, suggest a significant decline in this age group. What is suggested by the data is a growth rate of this age group relative to and paralleling the moderate growth rate of Nebraska's total population through 1975.

Considering only Nebraska's total and 0 to 19 year old population trends, one might conclude that the State's elementary and secondary schools have weathered the major storm and can look forward to calmer years. Such is not the case; for Nebraska, like the rest of the nation, is experiencing an urbanization of its population. In a state such as Nebraska, whose elementary-secondary educational system was organized to best serve a rural population, the adjustments of that educational system necessitated by the urbanization of the population, is at best a traumatic experience. Nebraska's population, has, in the sixties, maintained a population migration trend from the rural areas to the urban environment. The effects of this rural to urban migration of population in Nebraska has and will continue to have significant effects upon our elementary-secondary educational system, with equal implications for higher education enrollments.

Figure III illustrates this rural to urban migration of population in Nebraska during the sixties. Between 1960 and

SOURCE OF INFORMATION:

BUSINESS IN NEBRASKA, "NEBRASKA COUNTY AND CITY POPULATION ESTIMATE FOR 1966." BUREAU OF BUSINESS RESEARCH, COLLEGE OF BUSINESS ADMINISTRATION, UNIVERSITY OF NEBRASKA, #271. APRIL 1967, P. 4

1966 it is estimated by the Bureau of Business Research[3] that 63 Nebraska counties experienced decreases in population. Thirty-seven or 52 percent of those counties losing population between 1960 and 1966 experienced decreases of 5 per cent or greater. Nebraska's population is migrating to the State's existing population centers.

> "Taken as a group in 1966, the "small counties" with populations ranging up to 10,000 had nearly the same proportion, 22.1 per cent, of the state's population as in 1960, when the proportion was 22.6. This group, which includes nearly two-thirds of the state's counties, has slightly more than one-fifth of its people.
>
> The 'medium county' group, with 10,000 to 20,000 persons, showed a smaller growth than the others. Thus the share of the state's population in this group, which includes about one-fourth of the counties, dropped from 21.2 to 17.7 per cent.
>
> The 'large county' group, made up of about 10 per cent of the counties, those with populations between 20,000 and 60,000 showed a gain in the share from 20.8 to 22.2.
>
> The State's two 'metropolitan' counties, Douglas and Lancaster, taken together in 1960 provided nearly 500,000 or slightly over one-third of the state's population; in 1966, with about 576,000, this group's share was up to 38 per cent.
>
> Thus, the state's population growth continues to be concentrating more in those counties already having large populations in 1960."[4]

---

[3] Business in Nebraska, op. cit., p.4

[4] Business in Nebraska, op. cit., p.4

This rural to urban migration of Nebraska's population is reaffirmed in Table II. According to figures published by the Bureau of Business Research 49.1 per cent of Nebraska's population during 1960 resided in cities or towns of 2,500 or more population. By 1966 these same cities or towns contained 784,841 persons or 51.8 per cent of the State's population. Based upon 1966 population estimates, it is also significant to note that Nebraska's six largest cities[5] had a combined estimated population of 577,894 or approximately 38.1 per cent of the State total population. The State's two metropolitan areas, Omaha, and Lincoln, accounted for 482,211 persons or over 31 per cent of the State's total population. Other data collaborates Nebraska's rural to urban migration trend. In 1950 the total number of persons employed in Nebraska was 528,000. By 1975 this figure is estimated to increase to 645,000 for a net gain of 107,000 employed persons. During this same period the total employment in Omaha is estimated to increase from 103,000 to 267,000 or approximately all the total state gain.[6]

Source of Information: Business in Nebraska, "Nebraska County and City Population Estimates for 1966," Bureau of Business Research, College of Business Administration, University of Nebraska, #271, April, 1967, p. 5.

This rural to urban migration trend of Nebraska's population is, for the elementary-secondary schools of the State, the most singularly significant population trend in Nebraska. It is also a trend which promises to continue undiminished into the seventies.

SUMMARY

There are three major population trends occurring in Nebraska which have and will continue to significantly affect elementary, secondary, and higher education school enrollments throughout the State of Nebraska. The growth of the State's total population, the distribution of that population by age, and the geographic relocation of that population, either in combination or singularly, create related trends in the elementary-secondary enrollment in the state.

Past and anticipated future trends in the total population of Nebraska would indicate that the State may expect a relatively stable population. The State's total population will continue to increase during the remainder of the sixties, but at a rate which is below the present national growth rate of approximately 1.4 per cent per year, a ratio also decreasing. In the absence of any unforseen events which would reverse or accelerate the State's total population growth trend, the trends in the distribution of the population by age and geographic location became of primary concern to the analysis and projection of elementary-secondary school populations.

The analysis of the distribution of the State's population by age, in particular that age group of 0-19 year olds, indicates that the State of Nebraska has experienced an "explosion" within its total population. A decrease in the State's median age from 31.0 years in 1950 to 30.2 years in 1960 can be attributed in a large part to the 20 per cent growth in the 0-19 year old age group in the same decade. However, this "explosive" trend has apparently stabilized in the mid sixties at a point slightly below the peak of the explosion in 1966. In spite of this stabilization, it is significant to note that the State's 0-19 year old population is and, in all likelihood, will continue to represent a significant portion of the total population.

The most singularly significant trend within Nebraska's total population is the geographic relocation of that population. Like the nation as a whole, Nebraska is experiencing a rural to urban migration of its population. Statistics, both actual and estimated, reveal that counties, cities, and towns with established and large populations continue to grow and represent larger portions of the State's population. The opposite is true of those counties, whose populations are predominately rural and those cities or towns which are dependent almost entirely upon rural populations. Between

1960 and 1966 it is estimated that 63 Nebraska counties lost population, while during the same period, cities and towns of 2,500 population or more increased their share of the State's population from 49.1 per cent to 51.8 per cent.

The population trends and the resulting effects upon elementary-secondary enrollments within the State of Nebraska are obvious. Based solely upon an analysis of the State's total population and the distribution of that population by age, one may expect that the elementary-secondary school population has or will stabilize as a total statistic. But within this total statistic, significant gains and losses within counties will continue to occur. Questions raised by this analysis are; "At what level will elementary-secondary enrollments stabilize and when?" and "Where and when will significant elementary-secondary enrollment changes occur as a result of the rural to urban population migration?". Answers are to be found in Chapter II of this report.

CHAPTER II

ELEMENTARY-SECONDARY ENROLLMENT ANALYSIS

During the machine processing of available elementary-secondary enrollment data, it became apparent that the correction of many obvious errors in both the basic data and the resulting projections would have required subjective data manipulation. In order to preserve study objectivity, it was the decision of the study group not to subjectively manipulate the data. The reader is therefore cautioned that the validity of exact numerical or percentage enrollment projections is adversely affected in several instances. The study group does, however, place considerable confidence in the projected general trends in elementary-secondary enrollment through 1975.

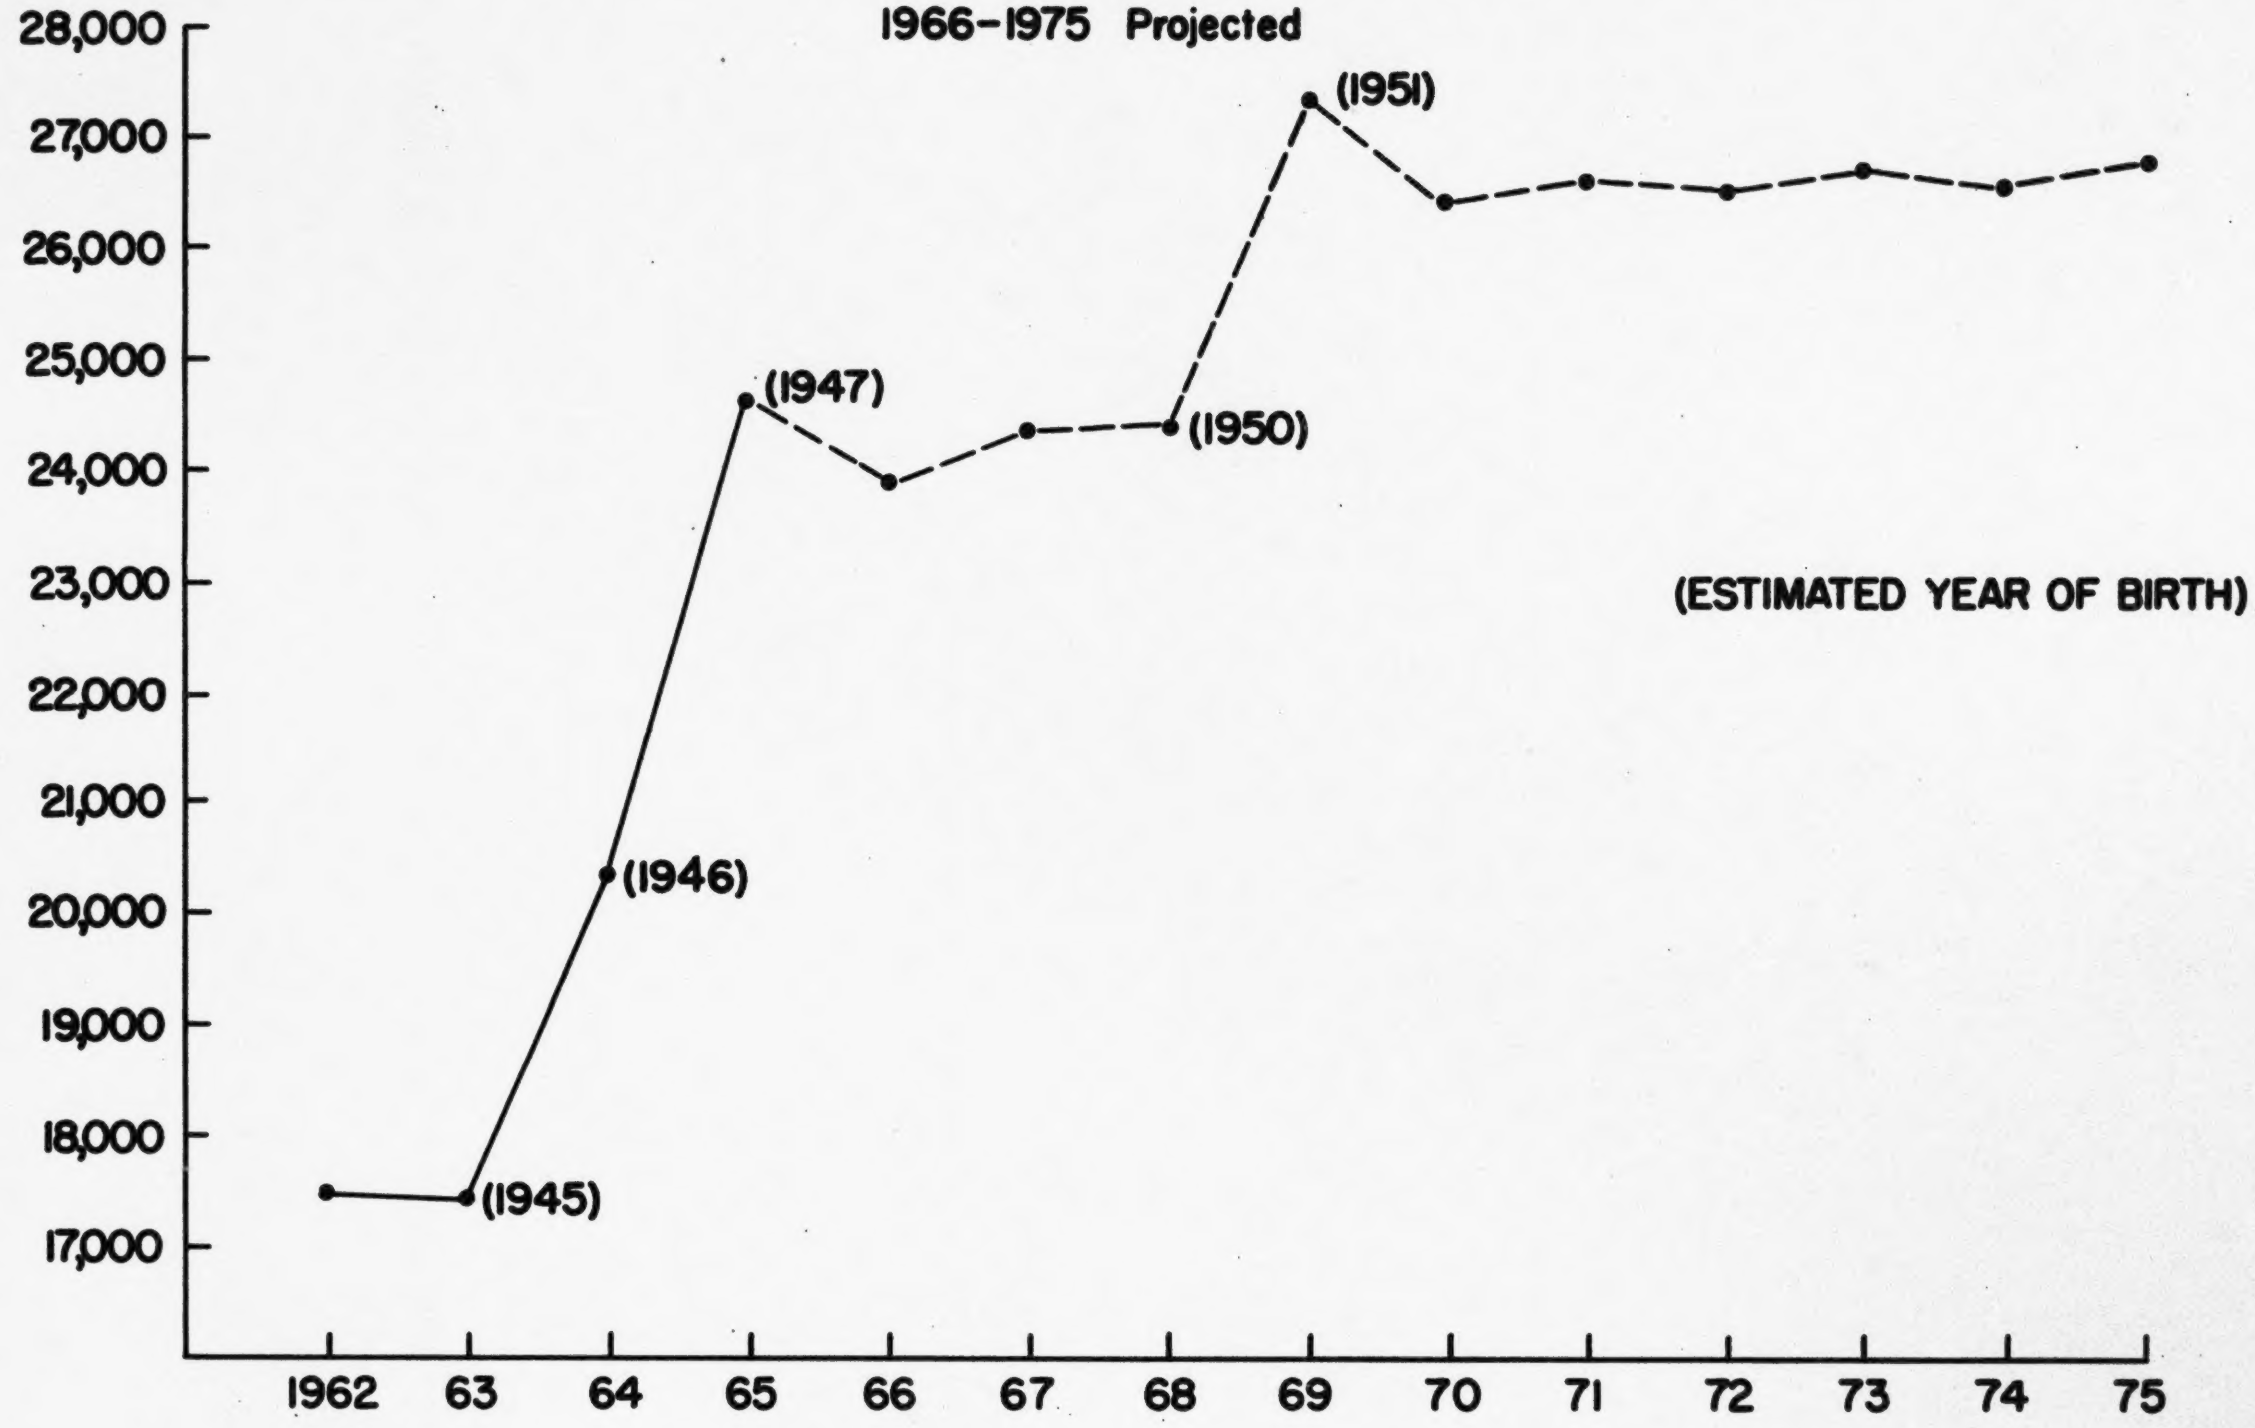
While the total state population trends in Nebraska may be described as"moderate", the elementary-secondary enrollment trends must be described as "explosive". Figure IV illustrates the "explosion" which has occurred in Nebraska elementary and secondary school enrollments during the fifties and the first half of the sixties. Senior class enrollments in 1963 (See Table III) or those students born shortly after World War II stood at 17,484 during the fall term. In just two short years the senior class enrollment in Nebraska had increased by 41% to 24,698 students in 1965. The explosive trend in senior class enrollments between 1963 and 1965 was, of course, the leading edge of the wave of students entering elementary schools between 1951 and 1953 and directly attributable to the sharp increase in births after 1945. Based upon calculated progression ratios by grade level, Figure IV shows that numerical members of students entering the 12th grade will recede slightly through 1966-68 only to show a marked increase during 1969. This climb in projected numbers of 12th grade to a maximum projected senior class enrollment of 27,306 represents those students born between 1951 and 1952 and may be related to a corresponding surge in the Nebraska birth rate during that period (See Table I).

The projected senior class enrollments between 1970 and 1975 show a stabilization of the trend between approximately 26,000 and 26,500 students per year. This projected enrollment of 26,000 to 26,500 senior students per year between 1970-1975 represents an increase of greater than 50% in the senior class enrollment over the 1962 enrollment

FIGURE IV

TOTAL NEBRASKA 12th GRADE ENROLLMENT—FALL TERM

1962-1965 Actual
1966-1975 Projected



of 17,496. This factor alone would indicate that the educational challenge of the 1960's will be just as real and pressing in the 1970's.

The problems associated with increasing elementary-secondary school enrollments in Nebraska are compounded when viewed in the context of rural to urban migration patterns. The relocation of our state's population from rural areas to urban environments creates a similar trend pattern in actual and projected distribution of elementary-secondary enrollments within Nebraska. Figure V shows that between 1962 and 1965 only seven Nebraska counties failed to show increased senior class enrollments. However, Figure VI shows, based upon calculated projections, that between 1965 and 1975, 49 counties will fail to show increases in senior class enrollments. Tables 3 and 4 summarize the senior class enrollment change by counties for the 1962-65 period and the projected 1965-1975 period. It is significant to note in table 3 that 11 counties between 1962-1965 experienced numerical increases in senior class enrollments of 100 students or more and that 27 counties registered increases of less than 25 senior students. Table 4 predicts that the consolidation or urbanization of elementary-secondary school enrollments will continue and gain momentum through the 1975 period. It is estimated that by 1975 only 42

counties will experience numerical enrollment increases in the senior class over the 1965 enrollment (see Table 4). Of the 42 counties with projected 1975 senior class enrollment increases, only 8 counties will experience increases of 100 or more senior students. It is significant to note that of these 8 counties, only Douglas, Lancaster, and Sarpy counties also experienced similar increases between 1962 and 1965. It is also significant to note in tables 3 and 4 that the state's two metropolitan counties, Douglas and Lancaster, can be expected to increase their share of the total Nebraska senior class enrollment from 33.3% in 1965 to 36.0% in 1975.

The consolidation of our elementary-secondary school population will obviously intensify the adjustment problems to be experienced by our schools in sight of increasing numbers of children to be served. The means of accommodating larger enrollments accomplished by some schools in the sixties may very well prove extravagant in the seventies, while other schools may be chided for shortsightedness. Although degree of stability is projected in numerical elementary-secondary enrollment between 1970 and 1975, the geographic distribution of that enrollment will continue to remain fluid.

SUMMARY

Chapter II

Nebraska elementary and secondary enrollments have and will continue to be affected by the major trends in the State's total population, the age distribution within that population and established migration patterns of that population.

Although the growth in the State's total population could hardly be defined as spectacular, the recent growth in elementary and secondary enrollments can hardly be defined as less than spectacular. This elementary-secondary enrollment growth is best illustrated by the growth of the senior class enrollments throughout the state. In 1963 there were 17,484 senior students in the State of Nebraska. In just two short years, this number had increased by 41 per cent to 24,698 senior students in 1965. It is estimated that, although senior class enrollments in the State of Nebraska will remain relatively stable at 24,000 students through 1968, a second peak enrollment year will occur in 1969 when approximately 27,000 senior students will be enrolled in the State of Nebraska. In the senior class enrollments alone, the State of Nebraska can expect by 1970 to have approximately 2,400 more senior students than were in the system in 1963. It is estimated that Nebraska may expect this approximate enrollment of 26,000 senior students annually through 1975.

The problems which accompany increasing enrollments have been and will continue to be compounded by the fact that enrollment increases will not be evenly distributed within the state. Like the state's total population, migration from rural areas to urban environments, the elementary-secondary enrollments have tended to increase more rapidly within those counties having relatively large urban population centers. It is estimated that by 1975 only 42 counties in Nebraska will experience numerical enrollment increases in the senior class over the 1965 enrollments. More significantly, while 11 counties between 1962 and 1965 experienced numerical increases in senior class enrollments of more than 100 students, it is predicted that by 1975 only 8 counties will experience increases of 100 or more senior students. It is estimated that the state's two metropolitan counties (Douglas and Lancaster) will increase their share of the total Nebraska senior class enrollment from 33-1/3% in 1965 to 36.0% in 1975. Thus, the trend toward consolidation of elementary and secondary school enrollments in the State of Nebraska is clear.

In view of the projected total elementary and secondary enrollments for the State of Nebraska and the enrollement projections by county, it is evident that the elementary and secondary schools in the State of Nebraska will continue to experience pressures and problems related to significant fluxuations in student enrollments.

APPENDIX I

STUDY PROCEDURES

The projection of elementary-secondary enrollments for the State of Nebraska through 1975 was accomplished by completing the following three procedures:

1. The collection and analysis of historic elementary-secondary enrollment data for the 1961 through 1965 school years.
2. The identification of statistical enrollment trends based upon the data collected for the 1961 through 1965 school years.
3. The projection of historic enrollment trends through 1975 and the calculation of numerical enrollments based upon those projections.

Basic historic elementary-secondary enrollment data for public and private schools in the State of Nebraska was provided by the Statistical Services and School Finance Section of the Nebraska State Department of Education. The Nebraska State Department of Education annually collects statistical data and educational information from each public school district in the state; from each school system that is operated by state institutions, departments, and colleges; and from each nonpublic school operating in the State of Nebraska. These reports are known as the Annual Fall Accreditation and Approval Reports. The data included on the reports were recorded by each public and private school system in the State of Nebraska on or about October 1 of each school year. Annual Fall Accreditation and Approval Reports records for 1961 through 1965 were available on approximately 500,000 data processing cards and contained grade by grade enrollment data from kindergarten through twelfth grade in all public and nonpublic schools. The records contained on the approximately 500,000 data processing cards were transferred to IBM magnetic tape for computer processing and storage by the University of Nebraska Computing Center. All computer programming and processing was carried out at the University of Nebraska Computing Center.

The grade by grade enrollment data from kindergarten through twelfth grade in all public and nonpublic schools between 1961 and 1965 was programmed into an enrollment data file and reviewed. Because of numerous revisions in the Annual Fall Accreditation and Approval Reports between 1961 and 1965, data file identification was inconsistent and was therefore redefined for computer processing purposes in this study. As a result of the review of the enrollment data file, enrollment records from the 1961 school year were determined to be significantly incomplete and therefore unusable for study purposes. Other missing, incomplete, or eroneous data was corrected when possible from original reports on file with the State Department of Education.

Statistical historic enrollment trends were identified between 1962 and 1965 by calculating grade rate progression ratios for the state and each county within the state. The grade rate progression ratios or the ratio of students advancing from one grade level to the next grade level were then plotted as statistical enrollment trends for each grade level, kindergarten through twelfth grade for the total state and each individual county within the state for the school years 1962, 1963, 1964 and 1965.

Future elementary-secondary enrollment trends for the State of Nebraska and each county within the state were calculated by averaging the grade rate progression ratios established upon the 1962 through 1965 enrollment date. The average grade rate progression ratio, thus established for each grade level, was plotted on a straight line projection through the school year of 1975. Enrollments at each grade level for the entire state and for each county within the state were calculated by projecting the 1965 school year enrollments on the straight line projection through 1975. This procedure is outlined in the following example.

	Grade 1	(Progression Ratio)	Grade 2
1962	200		
		1.0000	
1963	210		200
		1.0476	
1964	215		220
		.9069	
1965	220		195

Average Progression Ratio Grade 1 to Grade 2 - .9848

1965 Grade 1 enrollment	220
Progression Ratio Trend	x .9848
Projected 1965 Grade 2 enrollment	217

Other significant and related population material was reviewed as it had a significant bearing upon the elementary and secondary enrollment projections for the State of Nebraska. The review of other Nebraska population trends is presented in Chapter I of this report. The analysis of historic elementary-secondary trends and the projections of these enrollments through 1975 is presented in Chapter II of this report.

APPENDIX II

ENROLLMENT PROJECTION TABLES BY COUNTY
(Alphabetically)

Caution to the Reader

The projection of elementary-secondary enrollments through 1975 as contained herein have been calculated and projected upon the total county enrollment. The projections, therefore, may or may not be accurate projections of enrollment trends within individual districts within a county.

The reader is further cautioned that in many instances a projected decline or increase in elementary-secondary enrollment on a county basis will not be equally distributed among school districts within the county - on the contrary, many districts within counties with declining enrollment trends may experience increased enrollment at the expense of other districts.
